

Vladyslav Tochanenko

I'm a front-end developer focused on building clean, user-friendly web applications. Currently, I'm working on a large-scale EdTech project with a rapidly growing team, delivering both B2C and B2B applications and developing complex Funnels that guide users through personalized learning journeys. I collaborate closely with design, marketing, and business teams to align technical solutions with strategic goals and improve overall design, functionality, and user experience. I'm deeply involved in all aspects of the product – from refining the codebase to contributing ideas that enhance marketing and business strategies.

I'm always looking to grow, whether it's through earning new certifications, diving into backend or mobile development, or exploring areas like machine learning. I like sharing what I learn with my team and enjoy coming up with creative ideas to solve problems and make things better. For me, good code is just the start, I care just as much about the people who use the product and the people I work with.

Work Experience

SENIOR FRONTEND ENGINEER, SKELAR

2025 - 2026

- Active involvement in various aspects of the business, contributing technical insight to product planning and decision-making processes
- Close collaboration with design, marketing, and business teams to align technical solutions with strategic goals
- Technical SEO optimisations for the corporate website for enhancing organic search visibility and site performance
- Delivering results under tight time constraints while maintaining high standards of quality and reliability
- Development of new features and continuous enhancement of existing projects to ensure performance, scalability, and maintainability
- Refactoring and optimization of codebase and architecture to support rapid iteration cycles and improve long-term efficiency
- Implementation and analysis of A/B tests to drive data-informed product decisions and improve both user engagement and business metrics

FRONTEND ENGINEER, Valtech

2024 - 2025

- Development and maintenance of scalable Web applications for enterprise clients
- Collaborating closely with UX designers to implement responsive, accessible, and user-centered components, resulting in improving customer satisfaction and usability
- Documenting technical workflows, improving cross-team communication
- Contributing to sprint planning and architectural decisions to ensure feature scalability and maintainability

FULL-STACK SOFTWARE DEVELOPER, Netcracker Technology

2021 - 2024

- Development of Full-Stack B2B Web solutions, serving telecom and enterprise-level clients
- Development of modular, reusable frontend components and RESTful backend APIs, reducing technical debt and accelerating new feature development
- Design and integration of modernised UX for legacy platforms, significantly improving user flow and enhancing overall navigation clarity
- Creation of comprehensive onboarding materials and technical documentation
- Managing CI/CD pipelines and deployment process across development environments, improving release reliability and reducing manual intervention

INTERN, Netcracker Technology

2020 - 2021

- Leading of a cross-functional student team in developing a full-stack web application, applying Agile and SCRUM methodologies to manage tasks, sprints, and collaboration
- Delivering a high-quality prototype recognised for its design, performance, and usability among peer projects
- Presentation of project outcomes to senior stakeholders, demonstrating clear communication of technical decisions and team achievements

Education

Masters Degree in Software Engineering (Diploma with Honours)

📍 Taras Shevchenko National University of Kyiv 📅 2021 – 2023

Bachelor Degree in Software Engineering

📍 Taras Shevchenko National University of Kyiv 📅 2017 – 2021
